Career Objective

Final-year Computer Science student with hands-on experience building full-stack applications using the MERN stack and frontend interfaces with React and TypeScript. Skilled in designing REST APIs, database schemas, and responsive UIs, with proven ability to contribute to production systems during a frontend internship at IOCL. Seeking a Full Stack (MERN) or Frontend Developer role to build scalable, user-focused web applications.

Education

Jorhat Engineering College (Assam Science and Technology University)

Jorhat, Assam

Bachelor of Technology in Computer Science and Engineering

Expected Graduation: 2027

- CGPA: 9.19 / 10

Technical Skills

- **Languages:** JavaScript, TypeScript, Python
- **Frontend:** React, Next.js, Tailwind CSS, HTML5, CSS3, Three.js
- **Backend:** Node.js, Express.js
- **Databases:** MongoDB (Mongoose), PostgreSQL
- **AI/ML:** PyTorch, Deep Learning (CNNs, RNNs), LLMs (OpenAI, Gemini, Groq, Ollama), LangChain, RAG, AI Agents (PydanticAI, AutoGen, CrewAI), Prompt Engineering, LoRA Fine-Tuning, MCP
- **Cloud & DevOps:** AWS EC2, Docker, vLLM, MongoDB Atlas, Render, Vercel
- **Tools & Platforms:** Git, GitHub, RESTful APIs

Experience

Indian Institute of Technology (IIT) Guwahati

June 2025 – August 2025

Summer Research Intern

Guwahati, Assam

- Collaborated with a 4-member team (2 student researchers, 2 mentors) to benchmark **4 CNN+RNN architectures** (ResNet-101+LSTM, EfficientNetB0+GRU, DenseNet-121+GRU, ResNet50+LSTM) for Automatic Image Captioning on the **Flickr8K** dataset.
- Implemented and trained all four models using **Python** and **PyTorch**, identifying **ResNet50+LSTM** as the best-performing architecture after evaluating standard image captioning metrics across configurations.

Indian Oil Corporation Limited (IOCL)

January 2026

Frontend Developer Intern

Assam, India

- Collaborated with a **4-member** cross-functional team to design and build the UI for an automated identity verification system serving **20–50 employees**, delivered within a **1-month** internship.
- Developed **5 responsive, reusable UI components/screens** using **React**, **TypeScript**, and **Tailwind CSS**.
- Translated design requirements into functional interfaces, improving usability and consistency across the application.

Projects

URIEL001 | Next.js, TypeScript, Tailwind CSS, Groq API, Three.js

Live Demo

- Built a character-based AI chatbot with a persistent persona, calling **Groq's** OpenAI-compatible chat completions API server-side via a **Next.js** API route.
- Designed an interactive **WebGL/Three.js** shader-based visual (via `@react-three/fiber`) that reacts to mouse movement and generation state, with markdown-rendered, syntax-highlighted AI responses.

CounterAPI | React (Vite), TypeScript, Node.js, Express.js, MongoDB, Axios

Live Demo

- Built a full-stack REST API service enabling multiple websites to track custom event counters (e.g. page visits, button clicks) using per-site API keys, with custom **Node.js/Express** authentication and request rate limiting.
- Built and deployed a **React (Vite) + TypeScript** dashboard for managing counters end-to-end, hosting the stack across MongoDB Atlas, Render, and Vercel.

URLambda | React, TypeScript, Node.js, Express.js, MongoDB, Tailwind CSS

Live Demo

- Built a full-stack URL shortener with a dashboard to generate, manage, and track shortened links, backed by a custom **Express.js/MongoDB** schema, middleware, and RESTful routes.
- Implemented secure authentication using **Google Sign-In (OAuth)** and structured backend logic to support real-time tracking and analytics of converted links.

Certifications

- IBM Fullstack Software Developer — IBM (*in progress*)
- Introduction to Model Context Protocol — Anthropic (2026)
- Complete Generative AI Course: RAG, AI Agents & Deployment — Udemy (2026)
